HR Management System — Employee Engagement Module

- Refactored a monolithic codebase into a modular architecture, improving scalability, readability, and long-term maintainability across the system
- Implemented peer-to-peer recognition features using Vanilla JavaScript and AJAX, enabling real-time UI updates without page reloads for a seamless async user experience
- Secured sensitive employee data by applying SQL prepared statements and PHP session management to prevent injection attacks and unauthorized access

School Management System — School Directress Module

- Built a custom MVC framework from scratch using Object-Oriented Programming, enforcing strict separation of concerns and a modular, scalable architecture
- Engineered a Role-Based Access Control (RBAC) system with password hashing and granular permission sets tailored to administrative roles, securing access at the application level
- Designed an automated approval pipeline for multi-file report submissions, leveraging relational database logic to track and manage document lifecycles end-to-end
- Architected a normalized MySQL schema to handle complex academic records and maintain audit trails for school-wide concerns, ensuring long-term data integrity

Coffee.Dev — Full-Stack Café Management Web Application

- Architected a production-deployed platform using Next.js 14 App Router, strategically separating server components for data fetching and client components for interactivity to optimize performance and maintainability
- Engineered a secure staff dashboard with Supabase Auth, middleware route protection, and row-level security (RLS) policies — ensuring data access is enforced at the database level, not just the UI
- Built a real-time sales analytics dashboard with revenue tracking and interactive Recharts visualizations, alongside a full CRUD menu management system using Server Actions and cache invalidation via `revalidatePath`

Education

BS Information System - Bestlink College of the Philippines

Technical Skills

Languages: JavaScript, TypeScript, PHP, HTML, CSS, Java

Technologies: React, Next.JS, Tailwind CSS, Vercel, Supabase, Git, Github, MySQL, PostgreSQL, Node.JS
